## A Path to Purpose - Issue

As much info as the DB has is displayed, if there isn't data for something or someone, it's not shown. More frames from the same movie/content are shown at bottom.

This design isn't fully fleshed out.

### Crew

Director: [David Leitch](#)  
Director of Photography: [Jonathan Sela](#)  
Set Designer: [Zsuzsa Mihalek](#)

### Shot Info

Saturation:

Age:  
Gender:  
Ethnicity:

Title

IMDB Link or ID

Type

Once the IMDB link is in the box, we send an api call to try to fill as much of this data out as we can.

 Try to fill out as many of these available, we'll try to find as many as we can from other sources.

Director

Cinematographer

Editor

## Movie Title

Movie

Choose frames or drag here.

Once the user drops the frames, we are moved to the next page without any other input

## Movie Title

Movie

Once each shot has a green checkmark, eg all info has been filled out, review and submit is clickable. None of the data is uploaded at this point, still all local on the clients computer.

This is the same copy workflow as resolve

Click on a shot to select and middle click on another frame to copy its current tags.  
Double-click to go to single view for a specific shot.

Review and Submit

Frame 2 of 20

Tag things in the shot; Ex. Subjects, Objects or anything that doesn't fit in other boxes. ⬅Interior/Exterior   ▾

Ⓜ Main Subject Age   ▾

Main Subject Gender   ▾

Main Subject Emotion   ▾

Time of Day   ▾Number of People   ▾Time Period   ▾

I want to try and reformat this page to include more info. Missing a couple important tags. Not sure how to streamline this process any better. Force the user to include at least 5 tags.

I think avoiding scrolling here is ideal, so someone doesn't forget to fill out things below the fold, I also think splitting it into two pages isn't great for forgetting tags. But scrolling is probably the better of the two

# Thanks!
